## Experience

**Simbian.ai | AI Developer** Bangalore | Nov 2025 – Current

- Designed and built a configurable AI workflow platform with a Shortcut Builder, enabling customers to author, customize, and run security workflows with interactive inputs and structured results.
- Built core capabilities of a dynamic investigation harness, supporting tool execution, sub-agent delegation, persistent memory, and workflows that pause and resume for user input.
- Implemented fine-grained RBAC for agents and tools, including role-backed permissions, scoped access to memory and skills, and execution attributed to the initiating user with auditable tool calls.
- Enabled managed security service providers to distribute reusable workflows across customer tenants while preserving tenant-specific configuration and access controls.
- Developed investigation context and memory capabilities to retain knowledge across investigations and incorporate newly discovered evidence; migrated existing workflows to the new harness while maintaining backward compatibility.

**Dream11 | Software Developer** Mumbai | Nov 2024 – Nov 2025

- Architected high-availability backend and infrastructure systems for large-scale sports workloads, including services designed for high concurrency, low latency, and operational reliability.
- Built a team-creation and lineup announcement/display microservice capable of handling up to 40 million concurrent requests using Aerospike and Vert.x for optimized read performance.
- Maintained and extended an internal deployment platform used across the organization, including GCP support and improvements to deployment reliability for engineering teams.
- Built Kubernetes automation in Go, including load-balancer and routing-rule operators to reduce manual network operations and improve deployment pipeline consistency.

**Blaze AI / Quriate | Founding Software Developer** Bangalore / Remote | Aug 2021 – Oct 2024

- At Blaze AI, designed and built revenue-critical multi-platform campaign systems for LinkedIn, Twitter, Telegram, Discord, and XMTP, supporting personalization, follow-ups, audience workflows, and campaign analytics.
- Architected and optimized large-scale data pipelines across Step Functions, Lambda, Airflow, and Snowflake, improving pipeline stability while reducing AWS costs by 80% and Snowflake spend by 50%.
- Built backend systems for scraping protection, access control, campaign execution, and data processing across high-volume customer workflows.
- At Quriate, built an adaptive assessment platform using FastAPI, SQL, and pandas for online tests, automated evaluation, analytics, and institution-facing workflows.
- Developed an image/PDF ingestion pipeline to convert handwritten and scanned questions into editable LaTeX, reducing instructor question-creation time by 60%.

## Skills

| | |
|---|---|
| Languages: | Python, Go, Rust, Java, SQL |
| AI Systems: | Agent Harnesses, MCP, Multi-Agent Orchestration, Sandboxed Execution |
| Backend: | Django, FastAPI, Distributed Systems, Multi-Tenant Architecture, RBAC |
| Infrastructure: | Kubernetes, Docker, Terraform, CI/CD |
| Data/Platform: | PostgreSQL, Kafka, Aerospike, Snowflake, Airflow, AWS Step Functions |

## Open Source

**Open Source Contributions** Rust, Python, GTK, Developer Tools

- Maintain a custom fork of **Zed**, regularly applying workflow-focused patches and editor customizations for daily development.
- Contributed upstream to **Zed**, working on editor-level fixes and developer experience improvements.
- Maintainer of a **Catppuccin-based GTK theme**, supporting consistent theming across Linux desktop environments.
- Contributed bug fixes and improvements to open-source projects including **DiaTweaks**, **TLDR Pages**, **ILLA Builder**, **Novu**, and **Lawnchair**.

## Education

**Indian Institute of Technology Bhubaneswar** Bhubaneswar
Bachelor and Masters in Engineering *CGPA: 8.71* | 2019–2024
